

DATACAP

Automated Plant Floor Data Collection Solution

Fast. Accurate. Reliable.

Labor Collection

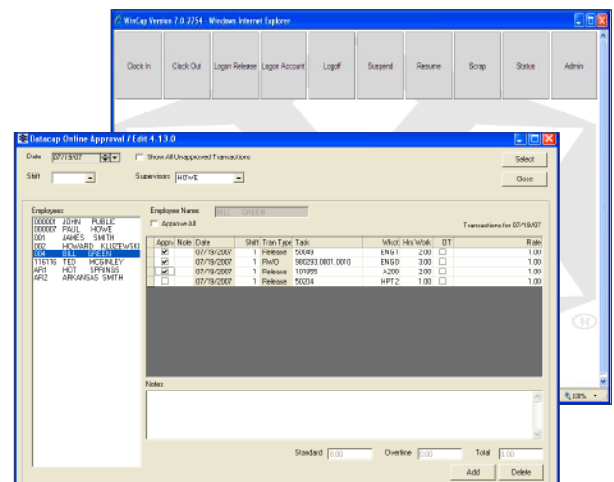

DATACAP is JOBSCOPE's web based plant floor system for labor collection and time and attendance tracking. Using DATACAP, employees on the plant floor follow simple prompts to scan bar-coded information that is used to create transactions, which are uploaded to JOBSCOPE. This greatly reduces the burden of data entry, provides more timely information for management, and enhances accuracy through DATACAP's use of bar-coding and extensive verification procedures.

Employees use DATACAP by scanning bar-coded work orders and employee badges into handheld devices or PCs. This data is sent over a network to a PC server running DATACAP. Here, the system tracks the time spent on jobs, performs calculations, and organizes the data into records. The process is completed when these records are uploaded to JOBSCOPE.

Labor Collection Customer Value

- ◆ Reduces data entry errors
- ◆ Provides exact distribution of labor charges
- ◆ Enables online supervisor approval
- ◆ Verifies data online
- ◆ Provides current availability of data
- ◆ Allows automatic breaks
- ◆ Provides flexible overtime

Remote Materials

DATACAP Remote Materials for JOBSCOPE automates your supply chain operations using a Windows handheld barcode scanner. Using Remote Materials, employees on the plant floor can collect data quickly and accurately with complete mobility. DATACAP Remote Materials can be used for a variety of material transactions such as receipts, issues, cycle counting, shipping, etc. This allows employees to be untethered while at the same time keeping them connected to JOBSCOPE's material management features.

DATACAP Remote Materials delivers a powerful, scalable, and flexible real-time solution that helps boost productivity, reduce costs, shorten order fulfillment times, and increase customer satisfaction.

Remote Materials Customer Value

- ◆ Unrivaled mobility
- ◆ Fast, reliable and accurate data collection
- ◆ Provides faster access to information
- ◆ Convenient access through web-based interface
- ◆ Built for any Windows compliant scanner
- ◆ Increases transactional productivity
- ◆ Reduces labor for transactions already being performed

Young Electric Sign

"DATACAP has saved thousands of man-hours and improved the data reliability of our job costing. It's helped us to make better business decisions"

- Warren Strong

Bar-coding Advantages

With a barcode data collection solution, capturing data is faster and more accurate, costs are lower, mistakes are minimized, and managing inventory is easier.

Benefits of barcode data entry:

- ◆ **Fast and Reliable Data Collection** – A barcode scanner typically can record data five to seven times as fast as a skilled typist.
- ◆ **10,000 Times Better Accuracy** – Keyboard data entry creates an average of one error in 300 keystrokes while barcode data entry only incurs about 1 error in 3 million.
- ◆ **Reduced Labor Costs** – With a barcode system, time-consuming and labor intensive manual entry is no longer required resulting in significant savings – often enough for a quick ROI for the entire data collection system.
- ◆ **Reduced Revenue Losses Resulting from Data Collection Errors** – Manual systems bring the risk of human error which can have negative consequences with customers. Through barcode data collection, error potential is extremely low and minimized.
- ◆ **Necessary Inventory Levels** – Using barcodes are one of the best ways to reduce inventory levels and save on capital costs. Keeping a tight handle on inventory can produce cost-savings opportunities.
- ◆ **Improved Management and Better Decision Making** – Enabling management to make fully-informed decisions can improve the operational direction of a department or the company. Having accurate data on hand that is immediately available for review and analysis enhances management decision making.
- ◆ **Faster Access to Information** – Immediate data collection provides instant access to critical information. With this capability, opportunities can be acted upon quickly to gain a competitive advantage.
